DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

2. Claims 1-2, 8-15 and 19-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 02/24974 taken in view of Linde et al (5114757).

'974 teaches treating a metal, such as copper in a multilayer printed circuit board (p 10), with an adhesion promotion composition, such as a bath of oxidizer/acid/corrosion inhibitor, called an alternative oxide bath (p11), to micro-roughen the metal (p 9, 11), followed by treatment with an aqueous wetting agent composition (containing agents such as polyethylene glycol (p 10)), which acts as a primer for the next layer, a polymer, such as a pre-preg, in order to improve the adhesion between the metal and the polymer (p 7-9). The bond between metal and polymer may be enhanced with pressure and heat (p 15).

'974 teaches that the wetting agent that is used as a primer is at 0.5-30% by weight (p 11), which overlaps with applicant's claimed range.

'974 teaches that the bond strength is 6.3-7.3 lbs/in² (p19), which overlaps with applicant's claimed ranges.

Art Unit: 1762

'974 fails to teach a silsesquioxane as a primer layer.

'757 teaches a silsesquioxane layer as an adhesion promoter between a metal and polyimide (see Abstract).

It would have been obvious to one of ordinary skill in the art to have incorporated the silsesquioxane into the '974 priming step because of the teaching of '757 that silsesquioxane improves the adhesion between metal and the next polymer layer.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
